DETAILED ACTION

Priority

1. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in the application.

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 12-07-99, and 4-9-00 was filed in compliance with the provisions of 37 CFR 1.97. Accordingly, the examiner has considered the information disclosure statement.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the

Art Unit: 2613

reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1 and 3 rejected under 35 U.S.C. 102(e) as being anticipated by Kleihorst et al. (US 6,498,815 B2).

Re claims 1 and 3, Kleihorst discloses a device and its method for recursive motion vector estimation comprising:

means for generating a plurality of candidate vectors from stored vectors (8 of fig. 1, e.g. the ME/MC for generating the candidate vectors from the frame memory 7 of fig. 1);

means for selecting one of these candidate vectors to generate a selected vector (21 of fig. 6, the step 21 selects one of the candidate vectors, see also col. 5, lines 4-9);

means for generating a plurality of test vector from the selected vectors (25 of fig. 6, the step 25 tests the candidate vectors that has been processed or not, see col. 5, lines 14-34);

means for select one of the test vectors to generate output vector (31 of fig. 6, the best match is found and selected, see also col. 5, lines 5, lines 42-46);

means for storing output vector (col. 2, lines 54-55, a storage medium used to store the encoded bit stream include the output vector mv from the ME/MC 8 of fig. 1).

Re claim 2, Kliehorst further teaches adding 0 to each component (8x8) of the selected vectors into the selecting test vector that still has the same result.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
